

AMENDMENT

Please incorporate the following amendments into the subject application.

IN THE CLAIMS

1-9 (canceled)

10. (currently amended) A microarray of discrete selected, distinct polypeptides on a slide, wherein each polypeptide is of at least 50 amino acids in length, wherein said microarray comprises 1000 or more discrete regions of selected, distinct polypeptide per cm² of slide wherein discrete regions have a diameter of from 20 to 200 μm, produced by the method of:

(a) loading an aqueous solution of a selected polypeptide of at least 50 amino acids in length in a reagent-dispensing device having an elongate capillary channel adapted to hold a quantity of the reagent solution and having a tip region at which the solution in the channel forms a meniscus,

(b) tapping the tip of the dispensing device against a surface of a planar solid support at a defined position, with an impulse effective to break the meniscus in the capillary channel and deposit a selected volume between 0.002 and 2 nl of solution on the surface of the planar solid support, and

(c) repeating steps (a) and (b) until said microarray is formed.

11-12 (canceled)

13. (previously presented) The microarray of polypeptides according to Claim 10, wherein said polypeptides are immunological receptors.

14. (previously presented) The microarray of polypeptides according to Claim 13, wherein said immunological receptors are antibodies.

15. (previously presented) The microarray of polypeptides according to Claim 10, wherein said polypeptides are antigens.

16. (previously presented) The microarray of polypeptides according to Claim 10, wherein said planar solid support comprises a cationic film which binds said polypeptide.

17. (canceled)

18. (previously presented) The microarray of polypeptides according to Claim 10, wherein said polypeptides retain the binding properties of the native polypeptide conferred by the three-dimensional structure.

19-30 (canceled)

31. (currently amended) A microarray of discrete selected, distinct polypeptides on a slide, wherein each polypeptide is of at least 50 amino acids in length and wherein said microarray comprises 1000 or more discrete regions of selected, distinct polypeptide per cm² of slide, and wherein discrete regions have a diameter of from 20 to 200 μm.

32. (canceled)

33. (previously presented) The microarray of polypeptides according to Claim 31, wherein said polypeptides are immunological receptors.

34. (previously presented) The microarray of polypeptides according to Claim 33, wherein said immunological receptors are antibodies.

35. (previously presented) The microarray of polypeptides according to Claim 31, wherein said polypeptides are antigens.

36. (previously presented) The microarray of polypeptides according to Claim 31, wherein said slide comprises a cationic film which binds said polypeptide.

37. (previously presented) The microarray of polypeptides according to Claim 31, wherein said polypeptides retain the binding properties of the native polypeptide conferred by the three-dimensional structure.

38-40. (canceled)
